## 2024\_28\_III\_OOPS Using Java Lab

### 2028\_REC\_OOPS using Java\_Week 1\_Q5

Attempt : 1

Total Mark : 10

Marks Obtained : 10

#### **Section 1 : Coding**

##### **1. Problem Statement:**

Emily has a beautiful circular garden in her backyard. She's interested in calculating two important measurements for her garden: the circumference and the area. To do this, she needs a program that can take the radius of her circular garden as input and provide the calculated circumference and area as output. The formulas she should use are as follows:

To calculate the circumference (C) of a circle, you can use the formula:

$$C = 2 * \pi * r$$

$$A = \pi * r^2$$

Where:

C represents the circumference.

A represents the area.

$\pi$  (pi) is approximately 3.14159.

r is the radius of the circle.

Emily is not a programmer, and she needs your help to create a program that will make these calculations for her garden.

#### ***Input Format***

The first line of input contains a single double-point number radius, representing the radius of the circle.

#### ***Output Format***

The output should consist of two lines:

The first line should print the circumference of the circle rounded to 2 decimal places, followed by the unit "meters".

The second line should print the area of the circle rounded to 2 decimal places, followed by the unit "square meters".

Refer to the sample output for formatting specifications.

#### ***Sample Test Case***

Input: 3.0

Output: Circumference: 18.85 meters

Area: 28.27 square meters

#### ***Answer***

```
// You are using Java
import java.util.*;
import java.lang.Math;
import java.text.DecimalFormat;
class Main{
    public static void main(String args[])
    {
```

```
Scanner scanner=new Scanner(System.in);
double radius = scanner.nextDouble();

double pi = 3.14159;
double a = 2*3.14159*radius;
double b = 3.14159*Math.pow(radius,2);
String formattedNumber = String.format("%.2f", a);
String formattedNumber1 = String.format("%.2f", b);
System.out.println("Circumference: "+formattedNumber +" meters");
System.out.println("Area: "+formattedNumber1+" square meters");

}
```

**Status : Correct**

**Marks : 10/10**
